218A-643E

Cue:

**Identity and purpose of UFO object photographed over
Mount Popocatepetl December 19-2000 at 6:10am.**

The long awaited eruption of Mexico's colossal volcano Popocatepetl (name that means "Smoking Mountain" in old Nahuatl language) that took place last Monday 18, brought not only fear and uncertainty but also a unexpected event captured by merely accident. Today the main headlines of local newspapers Milenio and Extramex present a photograph of an unknown luminous flying object over the erupting volcano Popocatepetl located near from Mexico City and Puebla.

The spectacular photograph taken by reporter Alfonso Reyes last Tuesday 19 at 6:10 AM while making a report of the gigantic violent awakening present a bright luminous object that contrast with the black clouds of smoke emanated from the volcano crater. The photo was taken in a 20 seconds exposure time and a 24 mm angular lens according to Mr. Reyes testimony. However he didn't saw actually the flying object and was until the development of the film that he discovered what the camera captured. Due to the long exposure time the camera captured the luminous descending trajectory of the object that seems to make a quick turn into the crater direction. The possibility of a meteor was discarded considering the described trajectory of the object and also no airplane or helicopter were present in that place for obvious reasons.

Daz Data summary:

Daz – early on in the session, still in stage 1 strong AOL data of:

- Particles
- Minute sized
- Charged
- Hutchison effect*

* The Hutchison effect is described as:

The Hutchison Effect - Canadian inventor John Hutchison is credited with the discovery of a highly-anomalous electromagnetic effect. The Hutchison effect has been known to cause the spontaneous levitation of a variety of common household & workshop materials during the operation of John's apparatus. **This has likened to a form of antigravity.**

<http://www.americanantigravity.com/hutchison.html>

Daz - Later in his session also gets lots of data, like:

- AI: feels strange like advance physics+ matter – electricity+ a field is present
- AOL – a power source

- Cold
- Solid
- Metallic
- object

- Tall
- Reaching

- Cold
- Grey
- Thick
- Used
- Study!
